

HELP YOUR CHILD LEARN

Learning is all about Vision:
80% of what a child learns in
school is presented visually.

Unfortunately, studies show that only 31% of children ages 6 – 16 have an annual eye examination, and 70% of children under 6 years have never had an eye exam.

As a result, 1 in 4 children will go back to school this year with an undiagnosed vision problem that could interfere with learning. Give your child the advantage that comes from good vision. Schedule an eye examination for your child before the start of the school year.
